#### 4.1 HAZARD INSPECTIONS

The management of the Company recognises that its activities and premises may present Health and Safety risks and shall identify the areas where control measures are required. Identification of hazards shall be undertaken at regular intervals and management shall take all practicable control measures to reduce the risks to its staff and visitors.

Hazards will be identified, risk assessments made and categorised as per our risk assessment formula.

##### HAZARD IDENTIFICATION AND RISK ASSESSMENT

- ❑ The policy of the Company is to identify hazards in the place of work and to assess the risk to Safety and Health and to control risks as far as is practicable so that they are reduced to an acceptable level.
- ❑ “Hazard” is taken to mean “any substance, article, material or practice, which has the potential to cause harm to the Safety, Health or Welfare of employees at work.”
- ❑ “Risk” is taken to mean “the potential for the hazard to cause harm in the actual circumstances of use.”
- ❑ Risk Assessment is based on the linking of the probability of occurrence with the severity of loss and/or injury. In this exercise, risks are graded “High,” “Medium” or “Low” and numerically rated using the formula below. This is to help with the giving of priority to the employment of controls and the allocation of resources.

| Revision number | Date     | Document owner | Approved by | Page number |
|-----------------|----------|----------------|-------------|-------------|
| 01              | xx/xx/xx | Manager 1      | Manager 2   | 34          |

The formula to be used for conducting risk assessments, assessing the risk from observed infringements/hazards or after an Audit, is shown here. Very minor injuries should score 1 while very serious ones will score higher, personal judgement is needed here. Likewise with the likelihood, 1 is very unlikely that anybody would be exposed to the hazard, while 7 means definite exposure to the hazard. Again personal judgement is needed.

Once the two scores are agreed they should be multiplied, thus giving a risk rating between 1 and 42.

Scores:

1-6 = Very Low risk

7-12 = Low Risk

13-18 = Low to Medium Risk

19-24 = Medium risk

25-30 = Medium to High Risk

31-36 = High Risk, stop the activity and implement immediate controls.

Over 36 = Very high Risk, stop the activity and implement immediate controls.

#### Risk Calculation Matrix

|                                | How likely is an injury |   |   |   |   |   |   |
|--------------------------------|-------------------------|---|---|---|---|---|---|
| How serious will the injury be | 1                       | 2 | 3 | 4 | 5 | 6 | 7 |
| 1                              |                         |   |   |   |   |   |   |
| 2                              |                         |   |   |   |   |   |   |
| 3                              |                         |   |   |   |   |   |   |
| 4                              |                         |   |   |   |   |   |   |
| 5                              |                         |   |   |   |   |   |   |
| 6                              |                         |   |   |   |   |   |   |

Notes:

Hazards = Things that can cause an injury.

Risk = The likelihood of an injury happening.

#### ☐ Risk Control.

Control measures are intended to reduce the risk to an acceptable level.

- ☐ Where practicable the Company commits itself to the elimination of hazards, whether that is by the provision of access arrangements, machine guarding or the provision of special tools etc.

## a) Balance

Since balance depends essentially upon the position of the feet, they should be apart about hip breadth with one foot advanced, giving full balance sideways and forward without tension.

In taking up this position, lifting is done by bending at the knees instead of the hips and the muscles that are brought into use are those of the thigh and not the back.

## b) Position of the Back

Straight - not necessarily vertical

The spine must be kept rigid and straight, but not necessarily vertical. The spine can be kept straight if it is within 15 to 20 degrees from the vertical. This, coupled with a bent knee position, allows the centre line of gravity of the body to be over the weight, so reducing strain.

## c) Position of the Arms and Body

The further the arms are away from the side, the greater the strain on the shoulders, chest and back. The elbow must at all times be close to the body, arms should be straight when carrying a load. One hand should be in advance of the other, whichever foot is

placed forward, the same hand is extended, the other hand is kept close to the body. This position ensures that the elbows are into the sides. This coupled with the correct foot position ensures a safe and easy fit.

d) Arms close to the Body

The further the weight is away from the centre line of gravity of the lifter, the greater the strain. At all times get close to the weight and try to make it part of you.

e) The Hold

When grasping a weight, one often hears the phrase "get a good hold". A good hold means a grasp with the roots of the fingers, not just the tips, plus contact of the weight with the palm of the hand.

Never forget that size and build has no bearing upon the amount any one individual can lift. Everyone should know their own capabilities and should never attempt to exceed them. If in doubt get help, it is far better to be safe than sorry.

Besides these key factors, there are other important points to remember.

2. Centre Line of Gravity

It is essential that the weight of object and the centre line of gravity of the lifter should be as close as possible to one another. This reduces strain, discomfort and the likelihood of loss of balance during the course of the lift.

3. Testing the Weight

When in the initial position for the lift, the lifter should test the weight of the object to make sure it is within his capability and not too heavy for one man to lift. Many accidents happen when a person raises an object a few inches off the floor, realises it is too heavy and lets go.

4. The shape of the weight

Note the shape of the object. It should be turned, if possible, so that the shortest measurement of rectangle is nearer to the centre line of gravity.

## 5. Movement.

The movement should be controlled and smooth. The weight should be kept close to the body.

Rhythm plays an important part in reducing tension and creating relation.

Before moving any loads, the job should be sized up and possible hazards moved or rectified.

An inspection of the load itself must be made to ensure that it can be moved without danger to the lifter or others.

The following check list can be usefully applied to all lifting jobs:

- if the load is heavy or too large for one person to handle, help should be obtained from a work-mate of similar physique
- jerking a load will add a little extra force, but it will also cause severe strain to the arm, back and shoulder
- even if a load is light in weight, it is dangerous to carry if it is large enough to obscure vision
- loads should not be pushed onto stacks above chest level. If a stack is this high, stand on a sturdy platform
- if the load to be lifted exceeds half the weight of the person lifting it, it is more than likely that the individual will lose his/her balance.

Note: if in doubt when lifting GET HELP.

**TRAINING**

Any employee whose job involves any manual handling shall be trained to allow him/her to carry this out safely. The extent of the training will depend on the type of lifting in which they are involved.

To ensure that all permanent electrical installations and distribution networks are installed and maintained in a manner to ensure safe working conditions for all employees.

### CONTROL MEASURES

1. ABC Company will ensure that the wiring installation on the premises is checked on a scheduled basis by a competent qualified electrician. The inspection should provide a report on the condition of the installation with particular reference to fire safety.
2. Dangerous or defective cabling should be replaced or remedied in accordance with the E.T.C.I.'s rules. It is important that all extensions, alterations and repairs to electrical circuits are carried out in a proper manner in accordance with E.T.C.I.'s rules.

### WIRING STANDARDS

All new fixed and temporary wiring will be to the latest Irish standards and, where practicable, in compliance with the national rules for electrical installations.

Precautions to be included either are or will be as follows:

- Flexible cables will also be adequately protected against external mechanical damage.
- Flexible cables for portable equipment will be properly mechanically restrained within plugs and couplers.
- Enclosures, plugs etc. should be maintained as part of the portable appliance of which they form part, but damaged

leads, plugs, etc. should not be allowed to remain in service should the equipment not be due for maintenance.

- A record should be kept of each item of equipment so that maintenance can be scheduled and recorded.
- Where appropriate all equipment not in use to be switched off, especially at the end of a working, unless of a specialist type, e.g. servers, etc.
- Sufficient sockets shall be provided to prevent overloading by use of adapters. Proper plugs shall always be fitted to electrical appliances and flex firmly clamped.
- Frayed and damaged cables shall be replaced immediately.
- Flexible cables should not be run across floors. Where damage at floor level to other cables is possible, protection by ramps, conduit or armouring will be considered and applied.

## 4.8 VISUAL DISPLAY UNITS (VDU'S)

### HAZARDS

The main problems that may be associated with VDU's are as follows:

(a) Visual Discomfort

This recognises a contribution from a number of ocular problems:

- (1) long/short sight problems
- (2) glare
- (3) lighting
- (4) screen brightness
- (5) clarity of characters.

(b) Posture

Good adjustable seating is required and it is essential to consider ergonomic factors.

(c) Radiation

Radiation levels across virtually the whole of the electro-magnetic spectrum are below internationally accepted exposure limits when tested under extreme conditions, i.e. close to the screen.

(d) Stress

The work at a VDU can be repetitive and monotonous. This is not exclusive to VDU users as mental stress is associated with all types of work.

On the basis of available evidence, the 'health hazards' associated with VDU's are largely exaggerated in the sense that they are unlikely to cause irreversible long term damage as opposed to varying degrees of discomfort.

Risk Assessment:

| Likelihood | Severity | Risk Value |
|------------|----------|------------|
| Score =    | Score =  | Result =   |

| Revision number | Date     | Document owner | Approved by | Page number |

| 01              | xx/xx/xx | Manager 1      | Manager 2   | 48          |

## CONTROL MEASURES

- ❑ Each workstation shall be assessed to ensure the individual's health is not likely to be put at risk.
- ❑ The Display Screen Assessment sheet in the appendix shall be used for this purpose.
- ❑ Be sure that VDU screens meet the appropriate criteria for performance, brilliance, character design, etc.
- ❑ The intensity of the beam, the brightness of the dots against the background and their time persistence are the most important determinants of operator 'safety'.
- ❑ This underlines the importance of keeping VDU's in good condition.
- ❑ It is important that chairs are correctly selected and used and that their siting is at an optimum distance from the machine.
- ❑ Lighting, ventilation and temperature must be carefully controlled to provide satisfactory environmental conditions.
- ❑ There should be a restriction on continuous use:
- ❑ Over two hours with pauses of between 5-10 minutes before further use.
- ❑ In this respect, short, frequent intervals are more beneficial than infrequent long breaks.
- ❑ The total time of continuous work at a VDU should be restricted to 6 hours per day.
- ❑ Vision should be tested before operating a VDU and at yearly intervals, or earlier if symptoms are experienced. Spectacle wearers should consult their optician.
- ❑ Epileptics should see a medical adviser before starting work.
- ❑ If there is any untoward incidence of VDU related problems medical advice must be sought.

#### 4.9 HAZARDOUS SUBSTANCES

No hazardous substances are expected to be used on the Client premises. However, the general controls below shall be implemented if necessary.

##### HAZARDS

Health hazards from substances can be divided into the following categories:

- ❑ External contact - corrosive, skin absorption, dermatitis.
- ❑ Inhalation - gases, fumes, vapours.
- ❑ Ingestion - swallowing.

##### RISK ASSESSMENT:

| Likelihood | Severity | Risk Value |

##### Control Measures

Almost all chemical materials are potentially dangerous. Although they may find their way into day to day use, it is usually a very diluted or otherwise modified form. The following general rules should always apply:

- Chemical products must never be allowed to come into eye contact. Contact with skin and mucous membrane must likewise be avoided. Wear protective equipment and clothing supplied. Always observe good industrial hygiene practice.
- Do not swallow materials or use in areas where food is being consumed. Smoking is also prohibited during application and curing.
- Inhalation of chemical vapours or dust should be avoided. Adequate ventilation must be provided. Suitable respiratory protection will be provided if appropriate.
- Facilities for the washing and cleansing of the skin must be made available with the necessary cleansers and barrier creams.
- Store all products in ventilated areas away from extremes of temperatures and environment.
- Clean all spillages instantly and dispose of waste and used containers properly.
- Except for transport in closed packages, only authorised personnel must handle materials.
- Ensure the correct equipment for handling the products is available.

## 4.16 Shop/Showroom hazards

## HAZARDS

- Slips and falls
- Housekeeping
- Stock

## RISK ASSESSMENT:

| Likelihood | Severity | Risk Value |
|------------|----------|------------|
| Score =    | Score =  | Result =   |

## Controls

Safety leaflets regarding blinds, etc. available in shop.

Housekeeping: - A good guide is to keep the premises, as you would wish to find your own home. Use bins provided for litter and waste. These are to be emptied regularly as per cleaning list requirements. Make sure that all aisles and passageways are kept clear. Pay particular attention to goods being placed on the floor in the shop area. Items to be placed on shelves must sit firmly and safely.

Where hosepipes, electrical cables or vacuum cleaner pipes are in use, extra care must be taken not to create a hazard. Warnings should be given to people in the area either visually or verbally.

Take extra care to ensure that sweeping brushes and other tools are always stored upright safely out of people's way and that they do not constitute a tripping hazard.

Any spillage of water onto the shop floor, or in the toilets should be protected immediately with a warning sign and the water taken off and mopped dry.

Take care when unpacking goods delivered, not to allow wrappers and strapping to stay on the floor - plastic and cellophane can be extremely dangerous.
