1.1 APPLICATION

This Safety Statement has been developed to assist ABC Company comply with relevant H&S standards and to ensure that clients are fully aware of ABC Company' commitment to high standards in H&S.

While we could loosely be described as an events management company, we specialise in Debs Planning. This does not necessarily mean that we plan all stages of the "event". A typical plan involves bringing the School Representatives to a series of possible venues and agreeing the broad parameters of the Debs. Based on this activity we have identified the known hazards and addressed them in this Safety Statement. We will use the Section 4.10 Event Safety, Security and Fire Risk Assessment for each Debs in order to identify any event or location specific hazard. These hazards can then be controlled.

1.2 OBJECTIVES OF THE SAFETY STATEMENT

To provide a reference for the policies and procedures used in house and at any Client premises or events. It is also used to assess and audit the levels of health and safety being achieved.

To provide evidence that the policies and procedures to ensure health and safety objectives are met and have been thought out and documented in order to help those who must execute them.

To provide a control document to record the pertinent changes to the Company Safety Statement, which become necessary due to the changing business environment.

To help identify training requirements that needs to be fulfilled in order to generate suitably qualified personnel to carry out the policies and procedures contained within the document.

To provide assurance that compliance with legal requirements for health and safety are being met or exceeded.

HAZARD IDENTIFICATION AND CONTROL MEASURES

PART 4

PREVIEW

4.1 HAZARD INSPECTIONS

The management of the Company recognises that its activities and premises may present Health and Safety risks and shall identify the areas where control measures are required. Identification of hazards shall be undertaken at regular intervals and management shall take all practicable control measures to reduce the risks to its staff and visitors.

Hazards will be identified, risk assessments made and categorised as per our risk assessment formula.

HAZARD IDENTIFICATION AND RISK ASSESSMENT

- ❑ The policy of the Company is to identify hazards in the place of work and to assess the risk to Safety and Health and to control risks as far as is practicable so that they are reduced to an acceptable level.
- ❑ "Hazard" is taken to mean "any substance, article, material or practice, which has the potential to cause harm to the Safety, Health or Welfare of employees at work."
- ❑ "Risk" is taken to mean "the potential for the hazard to cause harm in the actual circumstances of use."
- ❑ Risk Assessment is based on the linking of the probability of occurrence with the severity of loss and/or injury. In this exercise, risks are graded "High," "Medium" or "Low" and numerically rated using the formula below. This is to help with the giving of priority to the employment of controls and the allocation of resources.

Revision number	Date	Document owner	Approved by	Page number
01	xx/xx/xx	Manager 1	Manager 2	29

The formula to be used for conducting risk assessments, assessing the risk from observed infringements/hazards or after an Audit, is shown here. Very minor injuries should score 1 while very serious ones will score higher, personal judgement is needed here. Likewise with the likelihood, 1 is very unlikely that anybody would be exposed to the hazard, while 7 means definite exposure to the hazard. Again personal judgement is needed.

Once the two scores are agreed they should be multiplied, thus giving a risk rating between 1 and 42.

Scores:

1-6 = Very Low risk

7-12 = Low Risk

13-18 = Low to Medium Risk

19-24 = Medium risk

25-30 = Medium to High Risk

31-36 = High Risk, stop the activity and implement immediate controls.

Over 36 = Very high Risk, stop the activity and implement immediate controls.

Risk Calculation Matrix

	How likely is an injury						
How serious will the injury be	1	2	3	4	5	6	7
1							
2							
3							
4							
5							
6							

Notes:

Hazards = Things that can cause an injury.

Risk = The likelihood of an injury happening.

- ❑ Risk Control measures are intended to reduce the risk to an acceptable level.
- ❑ Where practicable the Company commits itself to the elimination of hazards, whether that is by the provision of access arrangements, machine guarding or the provision of special tools etc.

This approach will take into account normal good practice within this sector of industry and the standards and guidelines where these are available.

4.8 VISUAL DISPLAY UNITS (VDU'S)

HAZARDS

The main problems that may be associated with VDU's are as follows:

The main problems that may be associated with VDU's are as follows:

(a) Visual Discomfort

This recognises a contribution from a number of ocular problems:

- (1) long/short sight problems
- (2) glare
- (3) lighting
- (4) screen brightness
- (5) clarity of characters.

(b) Posture

Good adjustable seating is required and it is essential to consider ergonomic factors.

(c) Radiation

Radiation levels across virtually the whole of the electromagnetic spectrum are below internationally accepted exposure limits when tested under extreme conditions, i.e. close to the screen.

(d) Stress

The work at a VDU can be repetitive and monotonous. This is not exclusive to VDU users as mental stress is associated with all types of work.

On the basis of available evidence, the 'health hazards' associated with VDU's are largely exaggerated in the sense that they are unlikely to cause irreversible long term damage as opposed to varying degrees of discomfort.

Risk Assessment:

Likelihood	Severity	Risk Value
Score = 2	Score = 4	Result = 8

Revision number	Date	Document owner	Approved by	Page number
01	xx/xx/xx	Manager 1	Manager 2	38

CONTROL MEASURES

- Each workstation shall be assessed to ensure the individual's health is not likely to be put at risk.
- The Display Screen Assessment sheet in the appendix shall be used for this purpose.
- Be sure that VDU screens meet the appropriate criteria for performance, brilliance, character design, etc.
- The intensity of the beam, the brightness of the dots against the background and their time persistence are the most important determinants of operator 'safety'.
- This underlines the importance of keeping VDU's in good condition.
- It is important that chairs are correctly selected and used and that their siting is at an optimum distance from the machine.
- Lighting, ventilation and temperature must be carefully controlled to provide satisfactory environmental conditions.
- There should be a restriction on continuous use:
- Over two hours with pauses of between 5-10 minutes before further use.
- In this respect, short, frequent intervals are more beneficial than infrequent long breaks.
- The total time of continuous work at a VDU should be restricted to 6 hours per day.
- Vision should be tested before operating a VDU and at yearly intervals, or earlier if symptoms are experienced. Spectacle wearers should consult their optician.
- Epileptics should see a medical adviser before starting work.

If there is any untoward incidence of VDU related problems medical advice must be sought.

4.9 HAZARDOUS SUBSTANCES

HAZARDS

Health hazards from substances can be divided into the following categories:

- External contact - corrosive, skin absorption, dermatitis.
- Inhalation - gases, fumes, vapours.
- Ingestion - swallowing.

RISK ASSESSMENT:

Likelihood	Severity	Risk Value
Score = 2	Score = 6	Result = 12

These are general points of information only as ABC Company do not use Hazardous Substances. Manager 2 will address the issue of Hazardous Substances when devising the Event Management Plan for any Debs where Hazardous Substances are likely to be present. This will be ascertained from the Client.

General Precautions

Almost all chemical materials are potentially dangerous. Although they may find their way into day to day use, it is usually a very diluted or otherwise modified form. The following general rules should always apply:

- All substances are list in a file and copies of the Safety data Sheets are available.
- Chemical products must never be allowed to come into eye contact. Contact with skin and mucous membrane must likewise be avoided.
- Wear protective equipment and clothing supplied.
- Always observe good industrial hygiene practice.
- Do not swallow materials or use in areas where food is being consumed.
- Inhalation of chemical vapours or dust should be avoided. Adequate ventilation must be provided. Suitable respiratory protection will be provided if appropriate.
- Facilities for the washing and cleansing of the skin must be made available with the necessary cleansers and barrier creams.
- Store all products in ventilated areas away from extremes of temperatures and environment.
- Store any flammable substances in a locked flame proof cabinet.

Revision number	Date	Document owner	Approved by	Page number
01	xx/xx/xx	Manager 1	Manager 2	40

- Clean all spillages instantly and dispose of waste and used containers properly.
- Except for transport in closed packages, only authorised personnel must handle materials.
- Ensure the correct equipment for handling the products is available.
- If any person handling the materials shows the symptoms, which may possibly have been caused by exposure to chemical products, they should be removed from the area and medical advice sought without delay.
- Read the data sheet, container labels, and detailed health and safety information before using any products.
